EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with applicants' attorney, Mr. Anthony A. Hartman, on 26-NOV-2003.

The application has been amended as follows:

20. (Currently Amended) A process for the production of a cable having at least one covering layer consisting of a composition comprising at least one polymeric material and a mineral filler in a quantity greater than 30% by weight relative to the total weight of the composition, said cable being produced by using an extruder comprising a cylindrical casing, at least one extrusion screw of preset pitch positioned within said casing and having an axis of rotation parallel to the axis of said cylinder, a charging hopper located at a first end of said casing, a filtration section located close to the head of said screw, and positioned perpendicular to the axis of said screw, a connecting flange positioned downstream from the filtration section, and an extrusion head comprising a conveyer element and a die communicating with the exterior, so as to define a second end of said casing, said process comprising the steps of:

- a) conveying at least one conducting element inside of said extruder;
- b) feeding the polymeric material and the mineral filler, optionally premixed with other components of said composition, into said extruder via said charging hopper;
- c) filtering said composition transferred and plasticized by said extrusion screw; and
- d) depositing said composition onto said at least one conducting element; whereby the filtration operation is performed by using a filter support plate comprising an internal surface and a plurality of elements, which protrude therefrom and define a plurality of sectors between and within which the filtered composition flows, wherein the filtration efficiency (E) is greater than 0.8.

Art Unit: 1732

Claim 22 has been canceled.

23. (Currently Amended) A process according to Claim [22] 20, wherein the filtration efficiency (E) is greater than 0.9.

Non-elected claims 32, 33, and 34 have been canceled.
